EDUCATION

Illinois Institute of Technology

Bachelor of Science in Computer Science, Minor in Artificial Intelligence

Chicago, IL

Aug. 2024 – May 2027

PROJECTS

Scribbet | Rust, Tauri, Svelte, Whisper, Vulkan, GitHub Actions

Jun. 2026 – Aug. 2026

- Built a local-first Windows dictation app in Rust (10-crate workspace, Tauri + Svelte) transcribing speech fully on-device via Whisper (whisper.cpp), with a Vulkan GPU backend that falls back to CPU at runtime (no cloud, no account)
- Benchmarked the engine (80 decodes/model, 100 ms streaming chunks) at 183 ms p50 latency, 6.7x faster than the CPU fallback on identical hardware (i5-14400F / RTX 4060)
- Fixed a CI pipeline green-by-omission for 30 days, triaged 19 cargo-deny advisories, and built a release pipeline shipping NSIS/MSI installers with checksums, provenance attestation, and a version guard

Algomaxx | Next.js, React, Supabase, Judge0, Stripe, Claude API

Jun. 2026 – Aug. 2026

- Built a full-stack DSA practice SaaS (Next.js, Supabase Postgres/Auth/RLS, Stripe billing) with a 150-problem bank, timed focus mode, curated tracks, and a Claude-powered coach + weak-pattern analysis, backed by 208 tests
- Engineered the grading engine on sandboxed Judge0 Python execution with a stdin-driven harness and layered checkers (validators + structural adapters for linked-list/graph/tree problems), verified against local Python
- Hardened the paid APIs with Postgres-backed per-user rate limiting and a race-safe, fail-closed Judge0 spend cap, plus least-privilege grants that block client-side self-upgrade to the paid tier

Video Violence Detection | Python, PyTorch, ResNet-18, LSTM, Streamlit

Jul. 2026 – Aug. 2026

- Built an end-to-end CNN-LSTM video classifier (per-frame image preprocessing + ResNet-18 feature extraction → LSTM over 16 frames), reaching 89% accuracy and 0.92 F1 on the violent class, shipped as a Streamlit app + CLI
- Engineered the ML pipeline (stratified splits, inverse-frequency weighted loss for a 2:1 imbalance, and best-by-val-loss checkpointing) with fixed-seed reproducibility across all RNGs
- Diagnosed overfitting from training telemetry (val loss bottomed at epoch 1), cut the training budget 50%, and built a temporal ablation isolating the LSTM against a frame-averaging baseline

EXPERIENCE

Software Engineer Job Simulation

Sep. 2025 – Oct. 2025

Wells Fargo

Remote

- Designed an ERD modeling client-portfolio relationships for an investment management system
- Implemented it with JPA/Hibernate in a Spring Boot app, mapping entities via ORM annotations
- Managed the codebase with Git in a simulated corporate workflow using IntelliJ IDEA

P33 Budget Management Dashboard

Aug. 2024 – Dec. 2024

JP Morgan Chase

Chicago, IL

- Led a team to build a budget management dashboard for student users, from scoping to delivery
- Drove feature development across Agile sprints, owning testing and iteration cycles
- Designed the UX around real student budgeting workflows for a usable end-to-end product

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Rust, Java, C/C++, SQL

AI/ML: PyTorch, TensorFlow, NumPy, Pandas, Scikit-learn, Whisper, CNN/LSTM, Claude API

Frameworks & Libraries: Next.js, React, Svelte, Tauri, Node.js, Express.js, FastAPI, Supabase, Tailwind CSS

Developer Tools: Git, GitHub Actions (CI/CD), Docker, Vercel, Judge0, Stripe, Vulkan, Streamlit, Postman, VS Code, Cursor, Claude Code
